Software Engineer graduated from UniSenaiPR with over 5 years of experience in software development. Background spans full-stack development with strong focus on web and e-commerce, game development, and programming instruction. Currently pursuing a postgraduate degree in .NET Systems Architecture at FIAP + Alura.

Experience

Mid-Level C++ Game Developer

(12/2024 – 06/2026)

- Development of slot machine games in pure C++ on a proprietary in-house engine, working with 2D assets.
- Implementation of gameplay features such as bonus rounds, free spins, and cascading reels, integrated with existing game systems.
- Refactoring of critical engine modules — including symbol rendering, RNG, and animation systems.
- Optimization of performance bottlenecks: reduced memory usage, improved runtime FPS, and shorter loading times.
- Migration of legacy games across engine versions, ensuring compatibility and stability in production.
- Implementation of slot machine math models for different volatility profiles — from high-variance (larger, less frequent prizes) to low-variance (smaller, more frequent prizes), tuning RTP to specification.
- End-to-end authoring of Game Design Documents (GDD), covering mechanics, payable, screen flow, and bonus rules.
- Code versioning and branch management with Git/GitHub, integrated into a CI/CD pipeline.

Programming Instructor – Python

(06/2024 – 12/2024)

- Taught Python to beginner students, covering programming logic, data structures, and software development best practices.
- Developed didactic materials and hands-on exercises, providing individual progress tracking for each student.

Full-Stack / E-commerce Developer (Junior to Mid-Level) – Bis2Bis E-commerce

(11/2021 – 06/2024)

- Promoted from Junior to Mid-Level during tenure, progressively taking on more complex projects and greater technical ownership.
- Delivered full-stack development with PHP, JavaScript, and Magento, building and maintaining online stores for multiple clients.
- Integrated SOAP APIs and handled XML for connections with external systems and ERPs.
- Implemented technical SEO for e-commerce, optimized performance, and supported the full development cycle — from concept to deployment.
- Delivered complete e-commerce projects with custom integrations.

Education

Postgraduate Degree in .NET Systems Architecture

FIAP + Alura – Pós Tech (360 hours)

(January 2025 – December 2026) – In progress

Bachelor's Degree in Software Engineering

UniSenaiPR – Faculdade da Indústria

(2021 – July 2025) – Completed

Skills and Competencies

- Programming Languages: C, C++, C#, Python, PHP, JavaScript
- Game Development: C++, C#, Unity, real-time rendering, game design, Game Design Document (GDD) creation
- Full-Stack Web Development: PHP, JavaScript, React, jQuery, HTML5, CSS3, SASS, LESS
- E-commerce: Magento, SOAP API integration, SEO optimization
- Backend / Frameworks: .NET Framework, Laravel, Django, Node.js, Zend
- Databases: MySQL, SQLite, phpMyAdmin, Adminer; modeling with ORM and UML
- Cloud and DevOps: AWS, Huawei Cloud, Docker, CI/CD, Unity DevOps
- Version Control and Project Management: GitHub, GitLab, Jira, Trello
- Application Security: code security testing, XSS prevention, symmetric and asymmetric cryptography
- Machine Learning and Deep Learning: PyTorch, TensorFlow, Scikit-learn

Additional Information

- Advanced English.
- Pursuing a postgraduate degree in .NET Systems Architecture (FIAP + Alura).
- Self-taught profile with strong problem-solving skills.
- Personal projects available on GitHub.
